

1. INCIDENT LIFECYCLE AUTOMATION IN SERVICENOW

Project Title: Incident Lifecycle Automation in ServiceNow

Problem Statement:

In many organizations, IT incidents are reported through emails, phone calls, or informal communication channels. This leads to poor tracking, lack of proper classification, delayed escalations, and minimal visibility into resolution progress. Without structured Incident Management, issues may remain unresolved, SLAs may be breached, and root cause tracking becomes difficult.

Objective:

The objective of this project is to automate the Incident Management process in ServiceNow by implementing the complete incident lifecycle, from incident creation to closure. The project includes configuring workflows for incident assignment, prioritization, escalation, and resolution, integrating the Knowledge Base for quicker issue resolution, and connecting incidents with Change Management when changes are required. Notifications, SLAs, and approval workflows are configured to ensure timely and efficient incident handling, while comprehensive testing is performed to validate the end-to-end automation process and improve overall IT service management.

Business Objectives:

- Enable Service Desk agents to create and classify incidents
- Integrate Knowledge Management for faster resolution
- Allow reassignment to appropriate support groups
- Enable Level 2 technicians to investigate and resolve incidents
- Create emergency change requests directly from incidents
- Allow child incident creation for tracking recurring issues
- Generate knowledge articles from resolved incidents
- Improve SLA compliance and service visibility

Functional Scope:

- Incident Record Creation in Service Operations Workspace
- Incident Classification (Category, Subcategory, Urgency, Service, CI)
- Agent Assist Knowledge Integration
- Reassignment to Level 2 Support Teams
- Emergency Change Request Creation
- Child Incident Creation
- Incident Cause & Resolution Documentation
- Knowledge Article Creation from Incident
- SLA and Related Record Tracking

Stakeholder Mapping:

Stakeholder	Role	Needs / Expectations	Impact of Automation
End Users	Report IT issues	Quick resolution, visibility	Faster issue resolution; transparent tracking
Service Desk Agents	First-level support	Easy logging, classification tools	Standardized intake; faster escalation
Level 2 Support (Network/Hardware Teams)	Diagnose & resolve issues	Complete incident data, related records	Better diagnosis; clear task ownership
Change Management Team	Handle emergency changes	Structured change requests	Integrated change control
ServiceNow Admin	Maintain configuration	Scalable and trackable solution	Controlled process management

Execution Roadmap / Milestones (as built in the ServiceNow workspace):

1. Requirement Analysis & Planning
2. Create New Service, Service Offering
3. Incident Record Creation
4. Incident Classification
5. Knowledge Integration
6. Reassignment & Escalation
7. Incident Tracking by Level 2
8. Emergency Change Request Creation
9. Child Incident Creation
10. Incident Resolution
11. Knowledge Creation
12. Final Validation
13. Testing & Deployment Validation
14. Conclusion
