

3. REQUIREMENT ANALYSIS PHASE

3.1 Introduction

The Requirement Analysis Phase identifies the functional requirements, stakeholders, business objectives, and scope of the Incident Lifecycle Automation project.

The requirements were derived from the problems identified during the Ideation Phase and were converted into specific ServiceNow functionalities.

3.2 Business Requirements

The system should:

1. Allow users or Service Desk agents to report IT issues.
 2. Create incident records with relevant information.
 3. Classify incidents based on appropriate attributes.
 4. Determine incident priority.
 5. Assign incidents to suitable support groups.
 6. Provide knowledge assistance to support agents.
 7. Allow reassignment to Level 2 support teams.
 8. Support incident investigation.
 9. Allow emergency change requests to be created when required.
 10. Support child incident creation.
 11. Record incident cause and resolution information.
 12. Support knowledge article creation from resolved incidents.
 13. Track SLA information.
 14. Maintain related incident and change records.
 15. Validate the complete incident lifecycle.
-

3.3 Functional Scope

The functional scope includes the following:

Incident Record Creation

Incident records are created in the ServiceNow environment through the appropriate incident management interface / Service Operations Workspace.

Incident Classification

Incidents are classified using information such as:

- Category
- Subcategory
- Urgency
- Service
- Configuration Item (CI)
- Priority

Knowledge Integration

Knowledge Management / Agent Assist is used to provide support agents with relevant knowledge while investigating incidents.

Reassignment and Escalation

Incidents that cannot be resolved by the initial support team can be reassigned or escalated to appropriate Level 2 support teams.

Emergency Change Request

When resolving an incident requires an urgent change to the IT environment, an emergency change request can be created and associated with the incident.

Child Incident Creation

Child incidents can be created to track related issues or recurring incidents separately while maintaining their relationship with the parent incident.

Incident Resolution

Support teams document the incident cause, resolution information, and other required details before completing the incident.

Knowledge Article Creation

Useful resolution information from resolved incidents can be converted into knowledge articles for future reference.

SLA and Related Record Tracking

Incident SLAs and related records are tracked to provide visibility into the incident lifecycle.

3.4 Stakeholder Mapping

Stakeholder	Role	Needs / Expectations	Impact of Automation
End Users	Report IT issues	Quick resolution and visibility	Faster issue resolution and transparent tracking
Service Desk Agents	First-level support	Easy logging and classification tools	Standardized intake and faster escalation
Level 2 Support Teams	Diagnose and resolve complex issues	Complete incident information and related records	Better diagnosis and clear task ownership
Change Management Team	Handle emergency changes	Structured change requests	Integrated and controlled change process
ServiceNow Administrator	Maintain configuration	Scalable and trackable solution	Controlled process management

3.5 Requirement Analysis Deliverables

The Requirement Analysis Phase produces:

- Business requirements
 - Functional requirements
 - Functional scope
 - Stakeholder mapping
 - Incident lifecycle definition
 - Required ServiceNow modules and features
 - Implementation milestones
 - Validation requirements
-

3.6 Execution Roadmap

The project execution roadmap consists of the following major milestones:

1. Incident Record Creation
2. Incident Classification
3. Knowledge Integration
4. Reassignment and Escalation
5. Incident Tracking by Level 2
6. Emergency Change Request Creation
7. Child Incident Creation
8. Incident Resolution
9. Knowledge Creation
10. SLA and Related Record Validation
11. Testing and Deployment Validation
12. Final Validation and Conclusion
